PROFILE SUMMARY

Full Stack Developer building scalable web applications using the MERN stack (MongoDB, Express.js, React.js, [Node.js](#)). Proficient in real-time systems using Redis Sockets IO. Experienced with containerization (Docker) and cloud deployment on AWS ECS & EC2, Route53 Domain. Currently building a Project Tracking System with real-time architecture and background job processing. Passionate about developer tooling — published NPM packages and browser extensions used by developers.

TECHNICAL SKILLS

Languages	: JavaScript (ES6+) , TypeScript ,HTML5, CSS3, Bash
Frontend	: React.js, Tanstack-Query, Zustand, Tailwind CSS, Vite, Webpack
Backend	: Node.js, Express.js, REST API, Socket.io
Databases	: MongoDB, vectorDB, MongoDB Aggregation pipeline, Mongoose, Redis (Caching, Queues)
Full stack framework	: Next.Js (beginner-level)
GenAI	: AI Models, Agent, Tools integration, Script of model , Langchain, langgraph
DevOps & Cloud	: Docker, Docker Compose, AWS ECS (beginner level), Nginx, Kubernetes (beginner level)
System Design	: High level system design (HLD), Low level system design (LLD)
Version Control	: Git, GitHub, GitHub Actions (CI/CD)
Tools & Platforms	: Postman, VS Code, Linux, npm, Figma (basic) , jitsi.org
Soft Skills	: Problem Solving, Team Collaboration, Technical Writing, Ai using with UI Testing, Validation Testing, Interoperability Testing, E2E test Api, Unit test, Integration Testing

PROJECTS

Tech Stack: MERN Stack, React Query, React Hook Form, Gen AI, Zustand, MongoDB Aggregation Pipeline, JWT, Socket.io, BullMQ, IoRedis, Zod, Axios, Docker and Kubernetes , AWS EKS, AWS Route53

1. Student Doubt Resolution & Mentor Interaction Platform — SolveX

Built a mentor-based doubt-solving platform connecting students with verified mentors for real-time academic and technical problem solving, across categories like DSA, MERN Stack, System Design, and AI.

- Developed student-mentor interaction platform with category-based mentor discovery
- Designed communication flow for students and mentors to discuss requirements, timing, and pricing before sessions
- Built mentor verification logic ensuring only approved mentors accept doubts
- Designed backend architecture for registration, onboarding, doubt posting, and session management

GitHub: https://github.com/vishu9334/Solve-X/blob/master/DEMO_CREDENTIALS.md

2. GitHub Project Tracker & Automation Platform (Progress)

Built a GitHub-based project tracking platform that helps developers and teams track real engineering progress

Problem Solved:

by connecting repositories, GitHub issues, commits, webhooks, and automated testing status. The system solves the problem of fake or unclear progress tracking by verifying actual code changes, mapping commits with issues, and storing repository activity in a structured backend database.

Developers often push commits without clear relation to project issues, making it difficult to verify whether real work is completed. This project tracks repository activity in real time and links GitHub issues, commits, and testing results to show accurate project progress.

3. SMART TAB MANAGER (Chrome Extension)

Tech Stack : JavaScript, Chrome Extension API (Manifest V3), HTML, CSS

Description: A browser productivity tool that groups, suspends, and manages Chrome tabs intelligently.

Features include auto-suspend for inactive tabs (saves memory), tab grouping by domain, search across open tabs, and session saving/restoring. Published on Chrome Web Store with 4+ active users.
